Chadi Choker

Software & AI Product Engineer

chadichoker49@gmail.com | +961 81 410 706 | Lebanon

Profile

Software & AI Product Engineer with **2 years of hands-on experience** building and maintaining **production web and mobile applications across the full stack**, currently focused on **integrating AI into real products**. Combines solid engineering fundamentals — scalable API design, relational and NoSQL data modelling, and containerized cloud deployments — with practical experience embedding **LLM capabilities into business workflows**, building **MCP servers**, and running **agentic development workflows with Claude Code**. Takes ownership of features **end-to-end on existing production systems**, from requirements and architecture through testing, deployment, and iteration.

Professional Experience

Software & AI Product Engineer, *Aspire Software* 04/2026 – Present · Lebanon

- Developed and maintained a production **SaaS rental-management platform** (Rentall / RentWorks+) across the full stack using **React** and **NestJS (Node.js / TypeScript)**.
- Integrated **AI capabilities into the core product**, embedding LLM-driven functionality (Claude) into existing business workflows and backend services.
- Designed and implemented **MCP (Model Context Protocol) servers** to connect AI agents with internal systems, data, and tooling in a controlled, permissioned way.
- Established an **agentic development workflow with Claude Code** — Skills, subagents, custom commands, plan mode, and project context files — accelerating implementation, code review, testing, and documentation.
- Containerized and deployed services with **Docker on AWS**, supporting consistent, repeatable environments across development and production.
- Owned features **end-to-end** — requirements analysis, technical and **QA documentation**, and **Jira-based delivery tracking** through the release cycle.
- Collaborated with a distributed product and engineering team using **Git workflows, pull requests, and code reviews**.

Software Engineer, *Javelynx* 01/2026 – 04/2026 · Lebanon

- Developed cross-platform mobile applications using **React Native** integrated with backend REST APIs.
- Designed and implemented **backend services using Spring Boot**, including authentication and scalable API endpoints.
- Documented and tested APIs using **Swagger / OpenAPI** to improve integration and maintainability.
- Implemented **CI/CD pipelines** to automate build, testing, and deployment processes.
- Worked with **Docker containers** to standardize development and deployment environments.
- Participated in **debugging and resolving application issues**, improving system stability and performance.
- Collaborated with developers using **Git workflows, pull requests, and code reviews**.

Full-Stack Developer, *PROradius* 01/2025 – Present · Lebanon

- Developed and maintained platform features using **React (frontend)** and **Laravel / PHP (backend)**.
- Maintained and improved existing application modules ensuring **availability, performance, and reliability**.
- Implemented **invoice management, client management, and payment workflows** for a cloud-based platform.
- Investigated and resolved **application bugs and anomalies**, reducing regressions through debugging and testing.
- Designed and optimized **SQL queries and database operations using MySQL**.
- Integrated frontend components with backend APIs to deliver responsive and maintainable user interfaces.
- Participated in **application deployments and environment configuration** in development environments.
- Contributed to **refactoring existing code** to improve maintainability and performance.

Software Engineer – Level 1, *JumpCloud* 09/2024 – 02/2025 · Lebanon

- Developed and maintained backend services using **Node.js and Express.js** in a production environment.
- Designed and implemented **RESTful APIs** with a focus on reliability, maintainability, and clean code.
- Developed and maintained frontend features using **Vue.js**, integrating them with backend services and APIs.
- Worked with **SQL and NoSQL databases**, implementing queries, data validation, and data management.
- Used **Docker** to containerize applications and support consistent development and deployment environments.
- Contributed to **CI/CD pipelines**, automated testing, and deployment workflows.
- Used **Git and pull-request workflows** for source control, code reviews, and collaborative development.
- Investigated and resolved application issues through **debugging, logging, and troubleshooting**.
- Implemented **unit and integration tests** to improve application reliability and reduce regressions.
- Collaborated with **senior engineers** on feature development, technical decisions, debugging, and improving application quality.

Education

Bachelor of Science in Computer Science, *Lebanese International University* 10/2021 – 07/2024

High School Degree, *College Oriental Zahle* 2008 – 2021

Technical Skills

AI Engineering & Agentic Development

- Claude Code (Skills, MCP servers, subagents, custom commands, plan mode, CLAUDE.md)
- LLM integration (Claude API, tool use / function calling, structured outputs)
- MCP (Model Context Protocol) server development
- Prompt engineering and context design
- Agentic workflow automation for development and business processes
- AI-assisted code review, testing, and documentation

Architecture & System Design

- System design fundamentals (modular architecture, service boundaries, scalability)
- REST API design (versioning, error handling, OpenAPI / Swagger)
- Database schema design and query optimization
- Real-time communication (WebSockets)
- Performance optimization and caching strategies

Backend Development

- NestJS (Node.js / TypeScript)
- Spring Boot (Java)
- Node.js / Express.js
- Laravel / PHP

Databases

- MySQL, PostgreSQL, MongoDB
- SQL query design, indexing, and optimization

Frontend & Mobile Development

- React, Vue.js, TypeScript, JavaScript
- React Native (cross-platform apps, API integration)
- HTML, CSS, Tailwind CSS, responsive UI

Cloud, DevOps & Infrastructure

- AWS (cloud deployment and hosting)
- Docker containerization
- CI/CD pipelines
- Git (branching strategies, pull requests, code review)
- Linux (server environment, logs, deployments)

Security

- Authentication and authorization (JWT, OAuth 2.0, role-based access control)
- Secure API practices (input validation, rate limiting, secrets management)

Testing & Quality

- Unit and integration testing (Jest)
- API testing (Postman, Swagger)
- QA documentation, test scenarios, and root-cause analysis

Practices & Collaboration

- Agile / Scrum, Jira
- Clean code, SOLID principles, technical documentation
